ELEO
GAZEBO

Curtain installation on square gazebos

WE ARE HAPPY TO ASSIST YOU WITH THE FOLLOWING INSTRUCTIONS FOR INSTALLING THE CURTAINS ON YOUR SQUARE GAZEBO.

INCLUDED FASTENERS

- Eye bolt
- Rope tensioner with wire rope
- Curtains

REQUIRED TOOLS

- Pencil
- Tape measure
- Drill
- Drill bit, 6.8 mm
- M8 tap

STEP 01

Preparing the posts: The posts are not pre-drilled so that you can decide on the height of your curtains yourself. Proceed as follows:

1. **Determining the curtain length:** ELEO curtains are 2.13 m (approx. 7 ft.) long.

2. **Mark the height:** Mark the desired height at which the top point of the loop is to be attached to the post

We recommend drilling a hole at a height of 2.14 m (approx. 7.02 ft., measured including the mounting plate).

3. **Prepare the hole:** Position the hole exactly at the corner of the post and carefully pre-drill the hole using a 6.9 mm drill bit.

4. **Tapping:** Next, use an M8 tap to cut the thread.

STEP 02

Fitting the eyelets: Screw the supplied eye bolts into the pre-driled holes. Repeat step 1 and step 2 for all sides of the post where curtains are to be attached.

STEP 03

Fitting the curtains: Thread the wire rope, including the rope tensioner, through the loops in the curtains. Two curtains can be threaded onto the wire rope for each side of the gazebo.

STEP 04

Tensioning the wire rope: Hook the rope tensioners into the opposite eyelets. Tension the wire rope by turning the thread on the rope tensioner until the rope is taut.

STEP 05

Positioning and securing the curtains: Position the curtains as desired and secure them to the respective posts by tying them in place using the fabric ties provided or any other method of your choice.
